Chickweed
Chickweed is a winter annual. Stems are multi-branched, creeping, or ascending. The plants will spread 4 to 12 inches tall. It has small, smooth egg-shaped leaves opposite from one another. The flowers are star-shaped with five deeply notched white pedals. This weed is easily controlled with broadleaf herbicide.

Clover
Clover is a weed composed of three round leaflets at the top of a hairy leaf stalk which grows 2 to 4 inches tall. The leaf stalks sprout up with white or pinkish flowers ½ inch in size. Clover is easily controlled with herbicide.

Dandelion
Dandelion is a perennial with yellow flowers and a "puff-ball" seed head. Dandelion is one of the most common and problematic weeds of turfgrass and lawns throughout the United States. It is easily control with a broadleaf herbicide.

Dollar Weed
Dollar Weed is a water loving perennial which grows rapidly under warm conditions. Its leaves are circular, bright green, and have scalloped edges. This weed is easily controlled with herbicide.

Henbit
Henbit is a winter annual. The stems are square, 4 to 6 inches tall, and nearly smooth. The leaves are slightly hairy, rounded in outline, edges deeply scalloped and opposite of each other. It sometimes produces purple or reddish purple flowers. Henbit is easily controlled with a broadleaf herbicide.

Poa Annua
Poa Annua (also called Annual Bluegrass) is a winter annual. The stems are 3 to 6 inches tall, flattened, attached at the base. The leaves are very soft, light green, and the tips are boat-shaped. Poa Annua can be reduced with proper pre-emerge herbicide. The weeds will subside as temperatures rise.

Virginia Buttonweed
Virginia Buttonweed is a perennial weed that has a woody root crown that forms a coarse mat of vegetation from fuzzy, branching stems. It has smooth dark-green leaves an inch or more long, opposite each other along the stems with flowers small and white. To gain control, more than one treatment is usually required.
